About SunTank

- **SunTank** was established in 1994 and is today South Africa's largest and fastest growing solar heating company. The company's experience and skills ensure you receive the best solution for your needs.
- **SunTank** systems are made in South Africa using only top quality South Africa raw materials. This creates jobs and develops skill in the country.
- **SunTank** is a leader in the implementation of Stainless Steel technology for solar heating. This is by far the most advanced technology in water heating, giving you peace of mind for years to come.
- **SunTank's** in-house engineering department is ready to address your specific design requirements and oversee the quality of your installation.
- **SunTank** service outlets are available at all the major centres in South Africa.
- **SunTank's** representatives and technicians are all trained in-house, ensuring maximum quality control and the highest level of accountability to you.

SunTank is a leading force in the drive for a more diverse and competitive energy market in South Africa. Solar water heating has been singled-out as a major renewable, clean energy technology that significantly benefits homeowners. *SunTank* assumes the leadership role in ensuring the rights of South Africans to benefit from the country's renewable energy sources, and in particularly solar energy that is so abundant in our land.

Team up with us to create a better and cleaner South Africa.
Contact us now to discuss **your SunTank** solar water heating installation.

- We manufacture the complete solar water heating system
- We specialise in solar water heating only
- Established in 1994

SunTank installation options

designed to optimise the performance of the solar water heating system while preserving the aesthetics of your home

Close-Coupled SunTank System

The solar panels and the tank are both mounted on top of the roof.

- Ensures efficiency, simplicity & reliability
- Easy access for maintenance

Split SunTank System

The solar panels are placed on top of the roof and the tank is placed inside the roof.

- Used when homeowner prefers the tank not to be visible on the roof
- Requires sufficient roof space

Pump-Driven SunTank System

The solar panels are on top of the roof and the tank is placed anywhere, inside or outside the house.

- Allows maximum versatility in configuration
- The system includes an electrical water pump and a control unit

How to Choose the Size of the SunTank Solar Heating System Suitable for You

Generally speaking you should choose the largest system you can afford. This will save you more electricity on the long run.

The number of people in your household and their hot water consumption habits determine the size of the SunTank system that you would need.

As a rule-of-thumb, an average person consumes 50 litres of hot water per day. For a family of 4 choose a 200 litre system, for a family of 6 choose a 300 litres system etc.

Indirect Solar Water Heating System (used in areas prone to frost)

Direct Solar Water Heating System (used in costal and other non-frost areas)

- We manufacture the complete solar water heating system
- We specialise in solar water heating only
- Established in 1994
